

LAPORAN PRAKTIKUM

WUOKSHOP SISTEM INFORMASI

WEB SERVER

(TIF330805)

SEMESTER 3

Acara 5 (Routing, .htaccess, Request dan Response)

Nama:

Achmad Fatkur Rizki

NIM:

E41250750

PROGRAM STUDI DILUAR KAMPUS UTAMA (PSDKU)

TEKNIK INFORMATIKA KAB. NGANJUK

JURUSAN TEKNOLOGI INFORMASI

POLITEKNIK NEGERI JEMBER

TAHUN 2026

- **Studi Kasus**

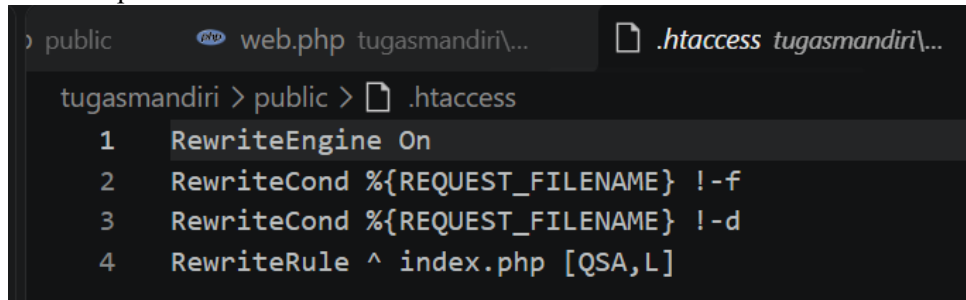

Tanpa routing, URL aplikasi menjadi jelek: `http://localhost/si-akademik/app/Controllers/MahasiswaController.php?action=index`. Dengan routing + `.htaccess`, URL menjadi bersih: `http://localhost/mahasiswa` atau `http://localhost/mahasiswa/5/edit`. URL yang bersih lebih profesional, mudah diingat, dan lebih aman (struktur folder tidak terekspos).

- **Tujuan**

Mahasiswa mengimplementasikan routing sederhana + `.htaccess` sehingga URL bersih berfungsi.

- **Langkah**

1. Buat file `public/.htaccess` sesuai contoh.

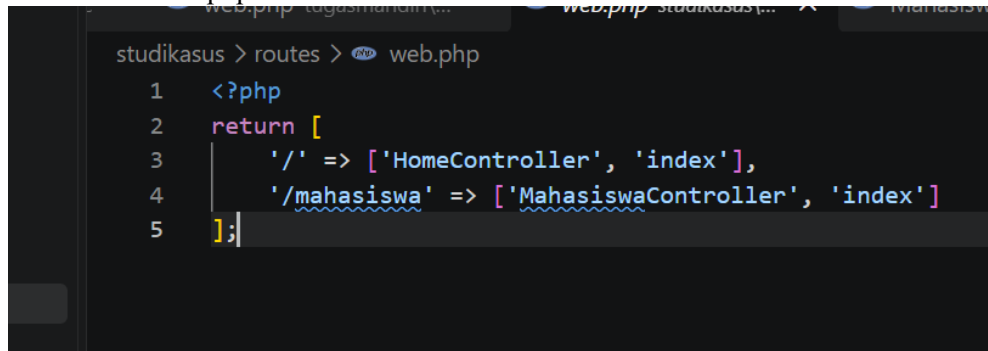

```

1 RewriteEngine On
2 RewriteCond %{REQUEST_FILENAME} !-f
3 RewriteCond %{REQUEST_FILENAME} !-d
4 RewriteRule ^ index.php [QSA,L]

```

2. Buat `routes/web.php`.

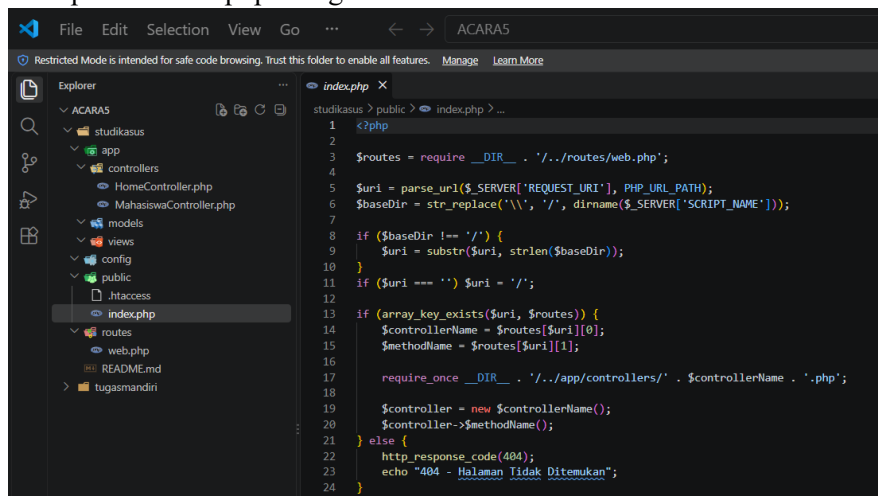

```

1 <?php
2 return [
3     '/' => ['HomeController', 'index'],
4     '/mahasiswa' => ['MahasiswaController', 'index']
5 ];

```

3. Buat `public/index.php` sebagai front controller.

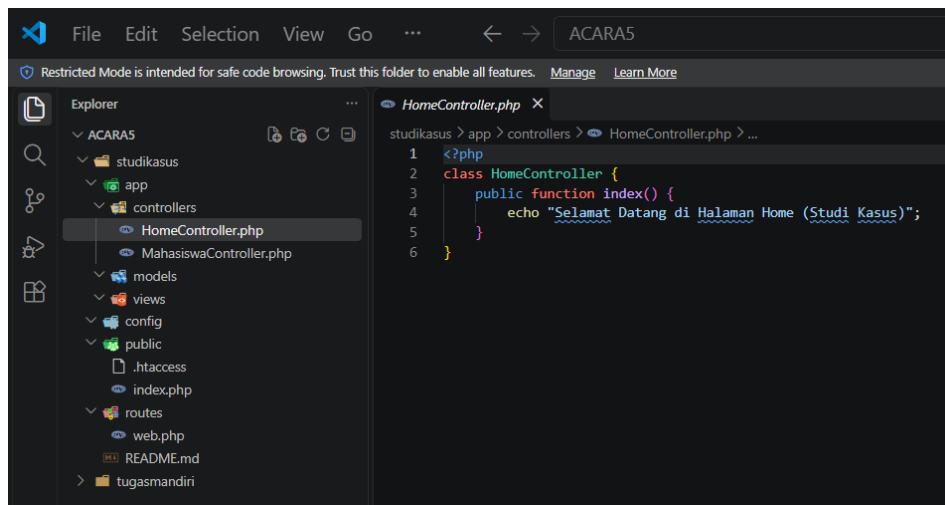

```

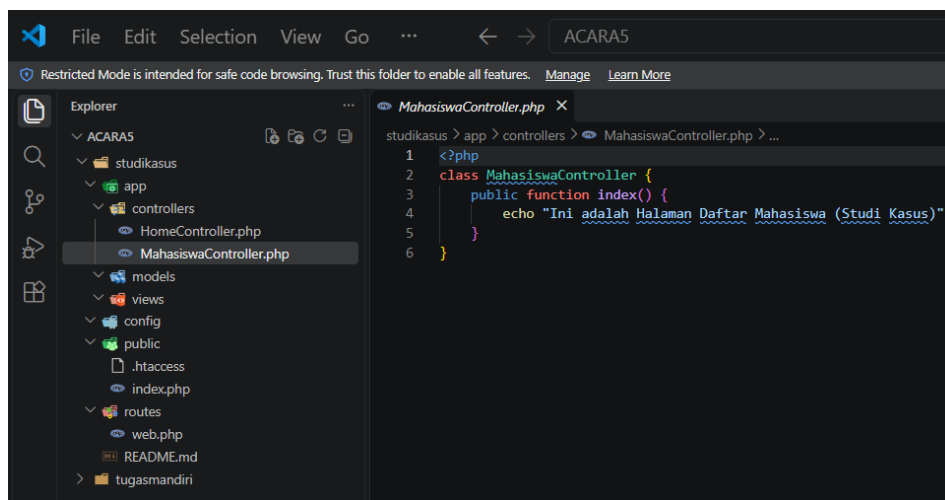

1 <?php
2
3 $routes = require __DIR__ . '/../routes/web.php';
4
5 $uri = parse_url($_SERVER['REQUEST_URI'], PHP_URL_PATH);
6 $baseDir = str_replace('\\', '/', dirname($_SERVER['SCRIPT_NAME']));
7
8 if ($baseDir !== '/') {
9     $uri = substr($uri, strlen($baseDir));
10 }
11 if ($uri === '') $uri = '/';
12
13 if (array_key_exists($uri, $routes)) {
14     $controllerName = $routes[$uri][0];
15     $methodName = $routes[$uri][1];
16
17     require_once __DIR__ . '/../app/controllers/' . $controllerName . '.php';
18
19     $controller = new $controllerName();
20     $controller->$methodName();
21 } else {
22     http_response_code(404);
23     echo "404 - Halaman Tidak Ditemukan";
24 }

```

4. Buat `HomeController` dan `MahasiswaController` sederhana (hanya echo dulu).

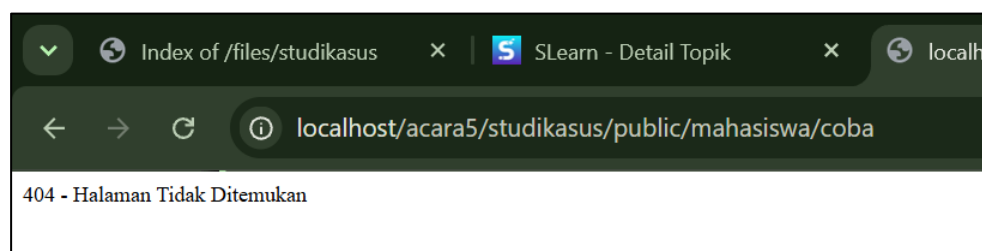

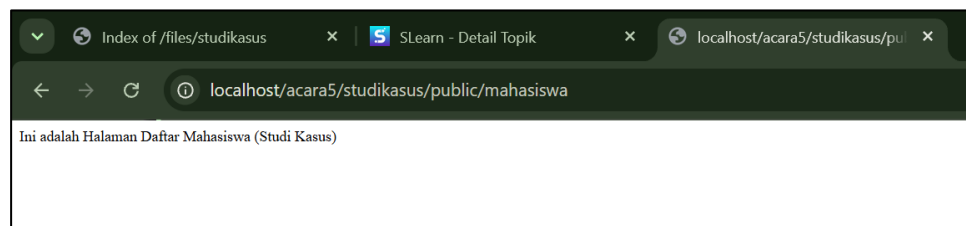

```
1 <?php
2 class HomeController {
3     public function index() {
4         echo "Selamat Datang di Halaman Home (Studi Kasus)";
5     }
6 }
```

```
1 <?php
2 class MahasiswaController {
3     public function index() {
4         echo "Ini adalah Halaman Daftar Mahasiswa (Studi Kasus)";
5     }
6 }
```

5. Uji URL: /, /mahasiswa, /mahasiswa/create, dan URL yang tidak ada (harus 404).

- **Tugas Mandiri**
 Tambahkan dukungan parameter URL sederhana, misalnya /mahasiswa/5 memanggil show(\$id) dengan \$id = 5. (Bisa menggunakan regex atau explode).

1. MahasiswaController

```

1 <?php
2 class MahasiswaController {
3     public function index() {
4         echo "Ini adalah Halaman Daftar Mahasiswa (Tugas Mandiri)";
5     }
6
7     public function create() {
8         echo "Ini adalah Halaman Tambah Mahasiswa (Create)";
9     }
10
11     public function show($id) {
12         echo "Menampilkan detail Mahasiswa dengan ID: " . htmlspecialchars($id);
13     }
14 }
  
```

2. /public/index.php

```

1 <?php
2 $routes = require __DIR__ . '/../routes/web.php';
3
4 $uri = parse_url($_SERVER['REQUEST_URI'], PHP_URL_PATH);
5 $baseDir = str_replace('\\', '/', dirname($_SERVER['SCRIPT_NAME']));
6
7 if ($baseDir !== '/') {
8     $uri = substr($uri, strlen($baseDir));
9 }
10
11 if ($uri === '') $uri = '/';
12
13 $matched = false;
14
15 foreach ($routes as $route => $handler) {
16
17     if (strpos($route, '(') !== false) {
18         $routeParts = explode('/', trim($route, '('));
19         $uriParts = explode('/', trim($uri, '('));
20
21         if (count($routeParts) === count($uriParts)) {
22             $params = [];
23             $isMatch = true;
24
25             foreach ($routeParts as $index => $part) {
26                 if (strpos($part, '(') !== false) {
27                     $params[] = $uriParts[$index];
28                 } elseif ($part !== $uriParts[$index]) {
29                     $isMatch = false;
30                     break;
31                 }
32             }
33
34             if ($isMatch) {
35                 $controllerName = $handler[0];
36                 $methodName = $handler[1];
37
38                 require_once __DIR__ . '/../app/controllers/' . $controllerName . '.php';
39                 $controller = new $controllerName();
40
41                 call_user_func_array([$controller, $methodName], $params);
42
43                 $matched = true;
44                 break;
45             }
46         }
47     }
48 }
49
50 if (!$matched) {
51     if ($uri === '/') {
52         $controllerName = $handler[0];
53         $methodName = $handler[1];
54
55         require_once __DIR__ . '/../app/controllers/' . $controllerName . '.php';
56         $controller = new $controllerName();
57         $controller->$methodName();
58
59         $matched = true;
60         break;
61     }
62 }
63
64 if (!$matched) {
65     http_response_code(404);
66     echo "404 - Halaman Tidak Ditemukan";
67 }
  
```
